Summary

Full-stack engineer and team lead with 9 years across fintech, insurtech, and consumer platforms. Currently leading 10 engineers at Paytm Insurance, owning architecture and delivery for term, health, and motor insurance journeys plus an internal CMS. Strengths in end-to-end system design across Golang and Node.js services, PostgreSQL data modelling, and large-scale React/TypeScript frontends, plus multi-agent SDLC automation spanning specification review through autonomous deploy and self-healing. Consistent record of mentoring engineers, setting testing and code-review standards, and shipping measurable business impact.

Work Experience

Paytm (Paytm Insurance) **December 2025 – Present**
Technical Lead *Noida, Uttar Pradesh*

- **Agentic PRD-to-PR Platform:** Architected a multi-agent pipeline that carries a feature from PRD to production – composable agent skills and a shared knowledge base drive specification review, implementation, PR review, automated fixes, merge, and deploy without manual hand-offs.
- **Specification Gating & Self-Healing:** Designed a review agent that validates incoming PRDs against the knowledge base, blocks specs with unresolved gaps, and raises clarifying questions inline before any code is written; downstream agents detect and repair post-deploy failures autonomously.
- **Term Insurance:** Built the end-to-end term life journey – quote comparison, eligibility and medical declarations, KYC, insurer underwriting hand-offs, and payment – taking users from lead to issued policy across web and app.
- **Health Insurance:** Delivered health purchase and renewal flows with plan comparison, member and pre-existing-condition capture, and multi-insurer API integrations.
- **Motor Insurance:** Shipped car and bike insurance journeys covering vehicle and previous-policy lookup, NCB handling, add-on selection, and instant policy issuance.
- **CMS:** Designed and built a content management system letting business teams configure plans, pricing content, banners, and journey copy without an engineering release, removing code deploys from the content workflow.
- **Leadership:** Leading a team of 10 across the term, health, and motor verticals – sprint planning, architecture and PR reviews, and end-to-end delivery ownership.

Forward Networks **July 2025 – November 2025**
Member of Technical Staff *Bangalore, Karnataka*

- **Designed & implemented:** a unified UI for collectors, consolidating status, versioning, and CRUD; eliminated manual API checks and improved org-wide visibility.
- **Developed & enhanced:** APIs (GET, PATCH, POST, DELETE) for bulk upgrades, default assignment, and IP/status tracking; improved management efficiency by 40%.
- **Delivered:** end-to-end UI/backend integration in 2 weeks with full stakeholder sign-off, streamlining collector monitoring.

Stanza Living **November 2021 – July 2025**
Software Development Engineer III *Gurugram, Haryana*

- **Jarvis (property operations platform):** Owned the platform end to end – Enkash invoicing integration, automated smart-meter onboarding, housekeeping beat-plan digitization, and a rebuilt forms system – cutting invoicing and onboarding time by 50%, raising task completion by 20%, and reducing form errors by 40% across approx. 10,000 properties.
- **Gordon (menu planning & budgeting platform):** Automated weekly menu creation and built the budgeting module with rule-based cost trimming and real-time cost and customer-experience analytics for catering managers, halving menu prep time, improving forecast accuracy by 15%, reducing ingredient costs by 8%, and holding 95–100% cost efficiency.
- **Stanza Living Website:** Owned design, functionality, and timeline end to end, optimizing for lead generation and property-visit tracking and boosting engagement by 30%.
- **Leadership:** Led teams of 4–8 engineers across Jarvis, Gordon, and the website, delegating work, reviewing PRs, and owning delivery across the property-operations and catering platforms.
- **Testing:** Built unit, integration, and automated UI/regression coverage across all three products, reducing production bugs by 35% and manual QA effort by 40%.

Tekion **September 2020 – November 2021**
Software Development Engineer II *Bangalore, Karnataka*

- **Mobile App for Service Centers:** Streamlined appointment scheduling and walk-in processes and shipped car pickup, self-service, and concierge features, reducing appointment scheduling time by 20% and improving customer satisfaction.
- **Technical Leadership:** Directed a team of 4, assigned tasks, and reviewed PRs to ensure high-quality code and timely delivery.
- **Testing:** Implemented comprehensive unit and integration testing to ensure reliability across booking and service modules, reducing production issues by 30%.

Gameskraft **April 2018 – September 2020**
Senior Software Engineer *Bangalore, Karnataka*

- **Comprehensive Solution:** Built a CRM tool utilized by the entire organization and a 100+ member customer support team. The tool streamlined cross-platform queries, automated 90% of tournament processes, reduced refund processing time by 50%, enabled seamless KYC handling for 1M+ users, refined tracking for 2M+ users, and efficiently managed discounts, user history, and game plays.
- **Game Feature Contribution:** Led development on Leaderboard, Tournament, and Loyalty Programs, enhancing game performance and user engagement.
- **Performance Optimization:** Reduced app size from 98 MB to 70 MB and improved speed by optimizing widgets, resulting in a smoother user experience.

Groww **July 2017 – April 2018**
Software Engineer *Bangalore, Karnataka*

- **Internal Support Tooling:** Built an internal support console used by the customer support team to handle 1K+ daily customer calls, streamline KYC processes for 50k users, and provide instant access to user information and activity logs.
- **Feature Enhancement:** Increased operational efficiency by 25% by integrating advanced features like real-time user data lookup and automated log analysis.
- **Optimized Performance:** Decreased load times by 50%, improving overall app performance and ensuring faster response times during customer interactions.

Projects

MarketMint — Paper Trading Platform for Indian Equities **Live Demo**

- Built a full-stack paper-trading platform for the NSE cash market (Golang, React + TypeScript, PostgreSQL), with a simulated broker engine that books fills, positions, and P&L against virtual cash accounts and supports market, limit, stop-market, and OCO bracket orders.
- Designed a fault-tolerant market-data layer chaining multiple price providers with automatic failover and health reporting, plus in-memory ranked instrument search across the full NSE universe.
- Developed a quantitative signals engine ranking the approx. 210-stock F&O universe on momentum, trend, and volume factors with ATR-based position sizing and walk-forward backtesting, including an autopilot mode that executes signals end-to-end; shipped with multi-user auth, a real-time dashboard, brokerage-charge bifurcation, and Docker-based CI/CD on Render.

Education

C-DAC: Centre for Development of Advanced Computing, Noida **July 2014 – June 2017**

- **Master of Computer Application (MCA) in Computer Science**, GPA: 8.7/10

Jaipur National University, Jaipur **July 2011 – June 2014**

- **Bachelor in Computer Application (BCA)**, GPA: 8.0/10

Technical Skills

Languages: JavaScript, TypeScript, Golang, HTML, CSS3, SCSS
Backend: Golang (chi, pgx), Node.js, REST APIs
Frontend: React, React Native, Next.js, Redux, Redux Toolkit, Mithril.js
Testing: Jest, Cypress
AI & Agents: Multi-agent workflows, agent skills, knowledge-base grounding, agentic code review
Database: MongoDB, MySQL, PostgreSQL
Cloud & Infra: AWS, Azure, Firebase, Docker, Nginx
Tools: Git, Webpack, Jira, Sentry
